Steam download keeps pausing disk write error

Steam disk write errors can occur when you download or update games purchased on the Steam platform. These messages typically appear when you try to install, download, or update a previously installed game. It may also appear when you try to start a game that needs updating. The instructions in this article apply to steam clients on Windows, macOS, and Linux. Steam disk write errors appear whenever Steam is not able to download game data and store it on your computer's storage drive during an update or new installation. It is usually accompanied by one of the following error messages: Game title (disk write error) Error during installation: C:\Program File (x86)\steam\steamapps\Common\game_titleAn Error occurs while updating game_titleAn Error occurs game_title Occurs when disk write error may occur during installation: Drive or Steam folder write protection. The hard drive is faulty. An antivirus or firewall blocks Steam from downloading and storing data. The Steam directory contains corrupted or outdated files. d3sign / Moment / Getty Images If you get a steam disk write error, try the following fix: Restart Steam. The easiest way to rule out temporary problems is to close and reopen the Steam client and download or play it again. Restart the computer. If closing and reopening Steam doesn't resolve the issue, rebooting your PC can help you resolve it by shutting down an ongoing process that could interfere with Steam. Removes write protection from the drive. Write protection prevents your computer from changing or adding files to a folder or an entire drive. If you think this is the root of the problem, check the drive where the Steam game is stored, and then remove write protection from that drive. Turn off read-only settings for the Steam folder. If the Steam directory is set to Read Only, the entire directory is write-protected. Go to the Steam folder properties and make sure you have not selected a read-only setting. Run Steam as an administrator. Running the software as an administrator gives you additional permissions and can solve some strange problems. Delete the corrupted file. If steam encounters a problem while downloading the game, it may result in a corrupted file that causes a Steam disk write error. To resolve this issue, go to the main Steam folder and open the steamapps/common directory. If you see a file with the same name as the game you want to play a game that is OKB sized, delete it and try to download or start the game again. Verify the integrity of the game file. Right-click the game in the Steam library and select Properties. Then go to the Local Files tab and select Check the integrity of the game file. If Steam finds a corrupted file, it automatically replaces it. If your game uses a launcher to download additional updates, do not complete this step. This allows you to replace the updated game with the default executable. Update through the launcher. Clear the Steam download cache. If the Steam download cache is corrupted, a disk write error may occur. To resolve this issue, open Steam and go to Steam > Settings to download > Download Cache >. Move steam to another drive. In some cases, there may be a problem with the drive that steam prevents from creating. If you have multiple drives or partitions, move the Steam installation folder to another drive. If this step resolves the Steam disk write error, check the original drive for errors. Check the drive for errors. In some cases, this process can identify the wrong sector and instruct Windows to ignore it in the future. If the problem persists or worsens, you may need to replace the hard drive. Disable the antivirus program or add an exception. In rare cases, antivirus programs can incorrectly identify Steam as a threat and prevent it from downloading and storing game data. If a Steam disk write error disables antivirus, antivirus scan adds an exception to Steam. Disable the firewall or add exceptions. If temporarily disabling the firewall resolves the issue, add an exception to Windows Firewall. Contact Steam for assistance.
